

COMPANY OVERVIEW

Aser AI is a Malaysian AI-powered risk management platform, founded in **2024**, delivering intelligence across **ESG, renewable energy, agriculture, and insurance**. Anchored by an initial focus on energy transition, its flagship use case covers Battery Energy Storage Systems (BESS); spanning risk monitoring, risk management, and parametric insurance underwriting with HasilWan as a current partner. The platform further extends into agricultural risk management, leveraging alternative data sources such as satellite imagery, IoT sensor readings, and daily transaction histories. Built on **proprietary LLMs and SLMs**, its flexible AI-as-a-Service architecture is actively expanding into adjacent verticals including electric vehicles, REIT, and credit risk. Co-created with **The Hive Southeast Asia** under Malaysia's **Dana Penjana Nasional** initiative.

MARKET OPPORTUNITY (GLOBAL)

- **ESG Assets:** \$45.6T → \$90.8T by 2030 · 18.8% CAGR
- **Insurtech:** \$14B → \$33.2B by 2030 · 24.1% CAGR
- **Climate Risk:** \$13.2B → \$35B by 2030 · 27.7% CAGR
- **Agriculture Risk:** \$8.6B → \$14.9B by 2030 · 14.7% CAGR
- **BESS Market:** Malaysia is becoming a globally favoured destination for expansion of battery manufacturing capacity and SEA is turning into an energy transition hub with rapid adoption of BESS

INVESTMENT THESIS

- **Addresses a clear gap** where traditional risk models fail on ESG, climate & agriculture risks
- **Proprietary LLMs/SLMs** create business moat
- **Versatile AlaaS** platform enables expansion into other industries (eg. oil, rare earth materials)
- **Institutional backing** from Dana Penjana Nasional and The Hive
- **Strong leadership team** with 100+ cumulative years of work experience

COMPETITOR ANALYSIS

- **AI-powered BESS Solutions:** Competitors such as Solarvest, Tesla's Autobidder and Fluence are working towards AI-driven revenue/cost optimization like peak shaving and market trading. Contrarily, Aser AI protects the asset and unlocks financing and insurance, capturing a largely untapped market segment.
- **Agricultural Risk Management:** Direct competitors such as Agi3 and Ceres AI target the same value chain: insurers, brokers and enterprise lenders. However, instead of relying purely on high-resolution imagery and individualized underwriting, Aser AI provides broader, integrated ESG and transition risk models.
- **Electric Vehicles:** Competitors such as Jupiter Intelligence and ClimateEngine provide macro-level environmental forecasting for EV supply chains. However, Aser AI focuses on the operational and financial health of EV assets. Another key differentiator is its direct insurance facility, which provides actionable underwriting and insurance access through its capacity partners.

LEADERSHIP TEAM

Jags Rao

Founder & CEO

- Former Director of Swiss Re (Zurich, Switzerland)
- 20+ years in tech, insurance innovation and strategic growth across India, Japan, US and Switzerland
- 2x founder with tech startup experience

Param Sivaprakasam

Executive Director

- Chartered Certified Accountant
- 40+ years in business innovation and market strategy
- PhD in Finance and Strategic Management & MSc in Intl. Bus.

Kamesh Raghavendra

Chief Product Officer

- General Partner at The Hive (Palo Alto, USA)
- 20+ years in leading fund investments across generative AI, cybersecurity, edge computing, fintech and blockchain
- Leadership roles at NetApp

Rohit Chandrasekharan Nambiar

Angel Investor and Executive Advisor

- Former Group CEO of Tune Protect and AXA Affin Life
- 20+ years in Insurance Industry
- Angel investor in multiple sectors

EXIT SCENARIOS

Strategic M&A

Potential mergers and acquirers include insurtech platforms expanding into ESG and climate risk capabilities, traditional insurers and reinsurers seeking upgraded risk models, and ESG or climate data platforms seeking consolidation.

IPO

Viable upon scale; ESG-native business model and AlaaS recurring revenue profile are well-suited to public market narratives in climate-tech and fintech.
