

COMPANY OVERVIEW

Kapitani is a Malaysian agritech startup, founded in **2020**, that provides a digital farm management platform and empowers smallholder farmers. The company digitises the agricultural value chain for smallholder farmers through three integrated products: **TaniOS**, a web-based farm management system for digital record-keeping and myGAP compliance reporting; **TaniPASAR**, a marketplace platform connecting farmers with verified buyers of myGAP-certified produce; and **Analitik**, a farm performance analytics tool. Additionally, by building verifiable financial track records for farmers, Kapitani provides farmers' access to **collateral-free microloans and invoice factoring** — solving the structural credit barrier that traps Malaysia's 400,000+ smallholder households in a harvest-to-harvest cycle. As recipient of the Khazanah KIIIC 2023 grant and supported by MAVCAP, Kapitani operates within Malaysia's national food security agenda under the **Dasar Agromakanan Negara 2.0** framework. Validated through an active pilot with the Melaka state government, Kapitani's crop-agnostic platform is designed to scale beyond Malaysia into the broader ASEAN smallholder market, where over 80% of farms are under two hectares in size.

MARKET OPPORTUNITY (MALAYSIA)

- **Food Import Gap:** Valued at RM93 billion in 2024 with low self-sufficiency in rice and many vegetables. MADANI's 13th Malaysia Plan includes reducing import dependence; anchoring government's support for tech-driven agriculture.
- **Underutilized Land:** Approximately 103,000 hectares of abandoned agricultural land as of 2024 due to aging farmers, lack of capital, fragmented land ownership.
- **Agriculture's GDP:** Agriculture is Malaysia's 3rd highest GDP sector at 5.9% (RM108.4B) and accounts for 5% of national employment (1.74 million jobs) with 2.2% CAGR.
- **Aging Farmer Base:** The average Malaysian farmer is 52.9 years old; creating urgency to attract younger agropreneurs.

INVESTMENT THESIS

- **Solves farmer's lack of capital** through digital book-keeping and farm diary tools that builds financial records; without which no bank or investor can lend to them.
- **myGAP compliance** creates a recognition for quality-produced goods, that acts as a business moat.
- **Government and institutional funding** from Khazanah Nasional (via MAVCAP), MOSTI (via Cradle Fund), 1337 Ventures, Artem Ventures and GX Bank.
- **B2B SaaS model** through web and mobile platform scales without land or capital ownership; recurring SaaS and invoice factoring fees generate diversified revenue.

COMPETITOR ANALYSIS

- **Farm Management SaaS:** International Farmable focuses on precision management such as GPS mapping and harvest tracking. Kapitani differentiates itself with a focus on smallholder farmers and myGAP compliance reporting.
- **Other myGAP-certified competitors:** Local Fefifo provides ready-to-farm co-farm spaces with myGAP SOPs, guaranteed offtake, and access to financing. However, Fefifo requires farmers to physically relocate to its co-farm sites. Kapitani instead serves farmers on their existing land which proves a lower-barrier and wider-reach model.
- **Supply chain:** Local FarmByte focuses on supply chain integration and infrastructure such as food hubs and storage spaces, while Kapitani has a distinct edge in financial inclusion and efficient myGAP-certification for independent smallholders.
- **Traditional AgriFinance:** Many startups are starting to leverage on digital solutions that incorporates farm data and credit scoring tool, making it harder for Kapitani to differentiate itself in this segment.

LEADERSHIP TEAM

Nazrul Hazeri Nazirmuddin

Co-Founder & CEO

- 15+ years in telecommunications and cloud engineering at Telekom Malaysia, Maxis and Digi
- MSc in Communications Network and Software Engineering and a BSc in Electrical and Electronics Engineering.

Muhammad Iskandar Mohd Lot

Co-Founder & COO

- 10+ years in sustainability, quality management and telecommunications
- MSc in Communications Network and Software Engineering and a BSc in Mechatronics, Robotics and Automation Engineering

EXIT STRATEGY

Strategic M&A

Natural acquirers span three tiers: government-linked agribusiness platforms (FELDA, FAMA, Agrobank) seeking digital infrastructure; domestic agritech peers (FarmByte, Fefifo) pursuing horizontal consolidation; and regional players for whom Malaysia's myGAP-certified supply chain serves as a gateway into ASEAN's premium food markets.
